

Professional Services Engineer

Location

Kitchener, ON

About the Company

Canadian Cloud Computing is a start-up located in the Communitech Hub in Kitchener. We are developing secure public, private and hybrid cloud computing services on a platform that is located entirely in Canada. We are complimenting this platform with a custom software development team and a professional services organization that focus on the unique architecture, deployment and management challenges inherent in delivering a 100% Canadian cloud to enterprise customers. We can offer you a challenging opportunity in a uniquely entrepreneurial environment. We're looking for people who can help get our company off the ground and take us into the clouds. You can find out more at www.canadiancloud.com.

The Opportunity

We're also looking for experienced software engineers to work with our customers and help them along their journey to the cloud. Call on all your networking, virtualization and solutions development skills to make sure that our customers flourish on our Trusted Canadian Cloud™. Working with our customers on complex cloud deployments that they themselves may not necessarily understand, you will find and implement innovative solutions to complex requirements. We will provide training towards industry certifications to support our VMware and Microsoft software partnerships. We offer flexible full-time and contract opportunities for the right people. You will have the opportunity to work remotely, in our office or at the customer site.

Who Should Apply

You should have extensive knowledge of networking (routing, switching, firewalls, storage, and disaster recovery), server virtualization (VMware and open source) and application deployment. If you do not have the necessary technical skills to solve the customer problem, you are willing to jump in and learn what you need. In your five or more years experience you have also developed excellent customer relationship skills and are comfortable working in a fluid and fast-paced environment.

Your background should include:

- Advanced understanding of VMware and open-source virtualization
- Detailed understanding of internetworking industry trends, including new products and solutions
- Excellent technical knowledge in Networking (routing, switching, firewalls, storage, disaster recovery), server virtualization(VMware), operations monitoring and trouble ticketing
- Experience in designing and deploying complex software solutions
- The ability to get things done without direct line authority and the ability to exercise personal influence to resolve conflict and manage customer expectations
- Ability to thrive and lead within a dynamic entrepreneurial environment
- At least 5 years industry experience

How to Apply

Please email your resume and cover letter to hire.me@canadiancloud.com.
