Canadian Cloud Computing
*The Trusted Canadian Cloud ™*

**Systems Administrator (SA)**

**Location**
Kitchener, ON

**About the Company**
Canadian Cloud Computing is a start-up located in the Communitech Hub in Kitchener.  We are developing secure public, private and hybrid cloud computing services on a platform that is located entirely in Canada.  We are complimenting this platform with a custom software development team and a professional services organization that focus on the unique architecture, deployment and management challenges inherent in delivering a 100% Canadian cloud to enterprise customers.   We can offer you a challenging opportunity in a uniquely entrepreneurial environment.  We're looking for people who can help get our company off the ground and take us into the clouds. You can find out more at www.canadiancloud.com.

**The Opportunity**
We need someone to provide technical expertise to the solutions engineering and operations teams in support of our internal and external customers. You will drive day to day support and operations for our entire cloud platform and applications to ensure the highest levels of productivity and performance.  You will be the one to keep the Canadian Cloud running smoothly and securely.  We will provide training towards industry certifications to support our VMware and Microsoft software partnerships.

**Who Should Apply**
You should have several years' hands-on experience in operating a virtualized environment and are comfortable installing, managing and trouble-shooting firewalls, switches, routers, servers and storage arrays.  You are comfortable with all aspects of keeping a complex corporate computing platform running and also have experience in web servers and corporate applications like exchange and SharePoint.

Your background should include:

- Advanced understanding of virtualization and hosted services
- Excellent technical knowledge and hands-on experience in:
  - Networking (routing, switching, firewalls, storage, disaster recovery)
  - Server virtualization (VMware ESX, vSphere,  MS Hyper-V, etc)
  - Operating systems (Linux, MS, Xen, Ubuntu etc.)
  - Server hardware (HP, Dell, Cisco)
  - Storage systems (NetApp, Dell, Fibre Channel, SAN, etc.)
  - Applications (Sharepoint, MS Exchange, SQL)
  - System operations monitoring and trouble ticketing
  - Desktop support
- Able to get things done without direct line authority; able to exercise personal influence, resolve conflict, and bring about required problem resolution
- At least 3 years industry experience

**How to Apply**
Please email your resume and cover letter to hire.me@canadiancloud.com.
